LTK - ECTS Guide (2011 - 2012)

This is the ECTS Guide for the **Faculty of Medicine** (also known as the ECTS Course Catalogue). It consists of four parts:

- 1) Information on Degree Programmes and Course Descriptions
- 2) Information on the University of Oulu
- 3) General Information for Students
- 4) General Description on Studies in the Faculty

1) Information on Degree Programmes and Course Descriptions

Through the links presented below you can find e.g. more specific descriptions of the programmes taught in the Faculty and their course information. NOTE that there are descriptions in English also on programmes and courses that are NOT taught in English. Please remember to check the language of teaching.

4. General Description on Studies in the Faculty of Medicine

Research and teaching carried out in the Faculty of Medicine cover the fields of Dentistry, Health Management Science, Medical and Wellness Technology, Medicine and Nursing Science.

Students are admitted to the following degree programmes:

Degree Programme in Dentistry
Degree Programme in Health Management Science
Degree Programme in Medical and Wellness Technology
Degree Programme in Medicine

Degree Programme in Nursing Science
 Teacher Training Programme in Health Sciences
 Master's Degree Programme in Health and Wellbeing in the Circumpolar Area

At the Faculty of Medicine there are four different basic degrees to study: Bachelor of Health Sciences, Master of Health Sciences, Licentiate of Dentistry and Licentiate of Medicine.

Bachelor of Health Sciences

The extent of the Bachelor of Health Sciences is at least 180 credits. The training is organized in such a manner that with full-time attendance the degree can be taken in three years.

Education leading to the Bachelor's degree will provide the student with:

- knowledge of the fundamentals of the major subject and the prerequisites for following developments in the field,
- knowledge of the fundamentals of at least one minor subject,
- knowledge and skills needed for scientific thinking and the use of scientific methods,
- knowledge and skills needed for studies leading to the Master's degree and for continuous learning,
- the capacity for applying the acquired knowledge and skills to work, and
- adequate communication skills.

Bachelor's degree consists of:

General studies
 Basic- and intermediate studies in the major subject
 Minor subjects
 Language and communication studies
 Optional studies

Bachelor's thesis and a maturity test are included in the subject studies of major.

The Bachelor's degree must be completed before the Master's degree. After a student has completed all studies required for the Bachelor's degree, he/she should apply for the degree from the Faculty.

Master of Health Sciences

The extent of the Master of Health Sciences is at least 120 credits. The training is organized in such a manner that with full-time attendance the degree can be taken in two years.

Education leading to the Master's degree will provide the student with:

- a good overall knowledge of the major subject and the fundamentals of the minor subjects,
- knowledge and skills needed to apply scientific knowledge and scientific methods,
- knowledge and skills needed for independently operating as an expert and developer in the field, and
- knowledge and skills needed for scientific postgraduate education.

Master's degree consists of:

Advanced studies in the major subject
 Minor subjects
 Optional studies

Master's thesis and a maturity test are included in the advanced studies of major.

After a student has completed all studies required for the Master's degree, he/she should apply for the degree from the Faculty.

Licentiate of Dentistry

The minimum extent of the Licentiate of Dentistry degree is 330 credits. Studies are pre-scheduled and the training is organized in such a manner that with full-time attendance the degree can be taken in five and a half years.

The degree programme consists of general, basic, intermediate and advanced studies, optional studies, language studies and compulsory practical training. The thesis and a maturity test are included in the advanced studies of major.

After a student has completed all studies required for the Licentiate of Dentistry, he/she should apply for the degree from the Faculty.

Licentiate of Medicine

The minimum extent of the Licentiate of Medicine degree is 360 credits. Medical studies are pre-scheduled and the training is organized in such a manner that with full-time attendance the degree can be taken in six years.

The degree programme consists of general, basic, intermediate and advanced studies, optional studies, language studies and compulsory practical training. The thesis and a maturity test are included in the advanced studies of major.

After a student has completed all studies required for the Licentiate of Medicine, he/she should apply for the degree from the Faculty.
