FEdu - Minor Subjects (2017 - 2018)

MINOR STUDIES 2017-2018

- The minor subjects offered by the Faculty vary year by year.
- As a rule, one group by minor subject is arranged.
- The size of a group is about 20 but no fewer than 10 students.
- An effort is made to guarantee a student's first choice within five years for all primary and kindergarten teacher students.
- A student can only be granted a single minor subject in the first round of applications.
- A student can be granted a maximum of two minor subjects in the minor subject selections of the same spring.
- All students studying for a basic degree are offered the possibility to complete two minor subjects within five years.
- No application is necessary for the minor subjects of sociology, Women's and Gender studies and psychology.
- If the Faculty is offering minor subjects organised by the Open University, the course shall be a first or second minor subject that complies with the structure of the degree (multiculturalism, general theology, health education).
- Only minor subjects previously completed/started in the Faculty and Open University minor subjects financed by the Faculty are taken into account in the selection of minor subjects.
- Apply/register for study modules in other faculties as instructed by the faculties in question.

Criteria for minor subject selection

* Primary and early childhood education teacher students are given preference in the following minor subjects: pre-school and primary education (not for kindergarten teacher students), art, physical education, music, technical work, textile work, and the Children's culture.

Application for minor subjects takes place in the order of preference indicated by the students. If there are more than 20 applicants for a minor subject, the selection of students to the group is determined on the basis of the following criteria:

1. Student's rank of the choice
2. Minor subjects started/completed before
3. Progress in studies, starting year

Teaching in minor subjects

So far as contact teaching is concerned, all of the studies in a minor subject are arranged in the course of a single academic year.

Please note that the courses in Education in Transition, Multiculturalism and Learning and Educational Technology are in English, while the other subjects are mainly in Finnish.

ay407040A Basic course in quantitative research (OPEN UNI) 5.0 op

ECTS Credits:

5 cr

Language of instruction:

Finnish, English for ITE

Timing:

2. or 3. year

Learning outcomes:

Having completed the course, the student knows how to

- describe and analyze the foundations of quantitative research in the philosophy of science, its characteristics, and the main stages in the progress of a research process
- plan and implement the main stages of a simple quantitative study
- evaluate and interpret quantitative studies conducted by others

Contents:

- starting-points of quantitative research and the main stages of the research process
- reliability of quantitative research
- representation of a one- and two-dimensional empirical distribution
- basics of statistical reasoning
- estimation
- statistical testings

Mode of delivery:

Face-to-face or blended teaching

Learning activities and teaching methods:

Lectures 24h, small group teaching 14h, independent work 90h

Target group:

Students in the Faculty of Education and students pursuing minor subject studies in education

Prerequisites and co-requisites:

Basic studies in education/psychology

Recommended optional programme components:

The study module is part of the intermediate studies in education/psychology and supports the writing of a Bachelor's thesis

Recommended or required reading:

As agreed, other works and videotaped expert lectures may also be used as learning materials.

Assessment methods and criteria:

The students carry out a learning assignment, either independently or in small groups, based on the lecture and other teaching in the course, the video materials compiled from the expert lectures, and literature. The learning assignment is planned and elaborated through work in small groups with the help of the teacher and other students, and the work is finally presented to the other students in a poster session, for instance. The learning assignment can also consist of several smaller parts.

In concrete terms, the learning assignment can be a small-scale quantitative study, analysis or summary of quantitative studies conducted by others on a certain theme, an analysis of an available quantitative data set, or an essay analyzing a special issue in quantitative research.

As agreed, the course can also be arranged and credits earned in some other way, for instance by taking part in the activities of a research group in the faculty.

Criteria for course performance:

0 = unfinished and fragmented, matters presented are not essentially connected with the topic, the use of sources is almost non-existent and there is no successful concretization of the basic principles of research.

1 = highly superficial, matters are presented detached from one another, the use of sources is one-sided and superficial.

2 = superficial, matters are presented partly in detachment from each other, the use of sources is satisfactory.

3 = reflective and matters are related to each other to some extent, the core argument is to be seen and the use of sources is mainly good.

4 = quite an analytical and partly successful whole, matters are related to each other well, and the use of sources is mainly very good.

5 = a systematic and analytical whole, in which the matters are related to each other very well, and the use of sources is mainly excellent.

Assessment method: Both learning task and examination or essay based on the learning material and lectures.

Seminar part 2 ECTS.

Assessment method: Learning portfolio in study group working

The assessment criteria are weighted in the following way:

- first learning outcome is highlighted in learning task (Basic part)
- all three learning outcomes are highlighted in examination or essay (Basic part)
- third learning outcome is highlighted in portfolio (Seminar part)

In approved (Pass) completion of the course, the use of central concepts of social sciences in educational research and analytical handling of basic issues in various contexts of education and growth is clearly structured, and matters are connected to each other at least to some degree. The handling of social, multicultural and juridical issues related to education and schooling in everyday life situations is reflective, and connections between matters are handled at least to some degree. In addition, the description of the historical, socio-political and professional starting points of Finnish education system and educational politics is clear and appropriate. In all assignments, there has to be a visible plot and mainly the use of references has to be at a good level.

In not approved (Fail) completion of the course, student's study products are unfinished, fragmentary and superficial, matters are presented in disconnected way, or the presentation does not show own thinking nor acquisition to the core themes of the course. Study material is not utilized sufficiently, and references are weakly used.

The course is held in the autumn semester

Learning outcomes:

Student reports on a theme or topical issue related to health promotion, health education or a special theme or current issue in health education at a chosen school.

Contents:

Written thesis based on literature or empirical data on health promotion or health education at school: writing, presenting and acting as a peer opponent. Alternatively, the student can design and implement a development project connected with the theme.

Mode of delivery:

web based teaching

Learning activities and teaching methods:

web-based teaching, independent work

Target group:

Open university students, school teachers and subject teachers, health care professionals, minor subject students in all faculties

Prerequisites and co-requisites:

The required (recommended) prerequisite is the completion of the following studies prior to enrolling for the course: Health Education, basic studies 25 cr and 20 credits of the Health Education, intermediate studies.

Recommended optional programme components:

The course is an independent entity and does not require additional studies carried out at the same time.

Recommended or required reading:

Literature studied for the thesis

Assessment methods and criteria:

The course includes weekly independent learning exercises and online work. The assessment of the course is based on the learning outcomes of the course.

Read more about [assessment criteria](#) at the University of Oulu webpage.

Grading:

The course utilizes verbal grading scale Pass/Incomplete.

Timing:

1st to 5th years

Learning outcomes:

Minor subject studies (25 ects) set up the foundations for the studies in Learning, Education and Technology. The studies are also open for other bachelor and master level students interested in developing their expertise in the contents of learning and educational technology.

In this programme, the students pursue their studies as a part of a multicultural group to learn the basics of learning sciences and technology-enhanced learning. One of the aims is to know how to apply this theoretical knowledge in different educational settings in a strong connection to working life. Collaboration, self-regulation and technology-enhanced learning are key elements of the minor studies both in theory and in practise.

After completion of the introductory studies in Learning, Education and Technology (25 ects), the student is able to

- define and explain the key concepts and theories related to learning sciences, especially self-regulated learning, collaborative learning, and technology-enhanced learning
- apply their theoretical knowledge of learning in different educational contexts
- use emerging technologies as teaching and learning tools, and justify their use based on current scientific knowledge about learning
- work efficiently in teams

Contents:

- Collaborative learning and problem-solving
- Self-regulated learning
- Technology-enhanced learning
- Learning environments and technologies
- Using theoretical knowledge of learning for real educational cases

Mode of delivery:

Face-to-face and online teaching

Learning activities and teaching methods:

The studies in educational technology focus on self-direction, collaborative knowledge construction and approaches surpassing science boundaries. Both face-to-face and online working methods are used, including small group sessions, self-study, lectures, expert sessions, discussions and workshops.

Target group:

Minor subject students in Learning, Education and Technology

Master's programme students in Learning, Education and Technology

Recommended or required reading:

The learning materials to be used in the courses are evaluated and selected annually. The materials represent both the most central theoretical background in the field and its most recent scientific research. The students choose some of the materials themselves depending on the content of the learning assignments.

Learning outcomes:

After completion of this course, the student is able to

- describe the basic concepts of learning sciences,
- name the main theories in learning and instruction,
- explain educational use of technology over time, and work in various multicultural groups.

Contents:

- Basic concepts and theories of learning and instruction
- Introduction to how people learn individually and in groups
- History and current trends of technology-enhanced learning

Mode of delivery:

Learning activities include both individual and collaborative studying supported by technology. There will also be lectures and short expert presentations by the teachers and researchers in the field of learning sciences.

Learning activities and teaching methods:

The student knows

- how to use music in a varied way to support learning and the child's development in general education.

The student is capable

- to evaluate her/his pedagogical competence as a broadly based music educator especially in the grades 0-6.
- of developing and applying various functional working methods to music education in its constantly changing scope of work.
- knows how to play music in the field of different musical styles, genres and practices. These include studies in instruments and singing, music technology, musicology and integrative project studies.

Contents:

The music minor consists of pedagogically inclined studies, which cover, comprehensively, different work methods in music education and pedagogy in the grades 0-6.

Mode of delivery:

Face-to-face teaching

Learning activities and teaching methods:

This course consists of five units, each of 5 credits:

- Introduction to music (5 credits)
- Development of musicianship (5 credits)
- Pedagogy of music (5 credits)
- Development as a music educator (5 credits)
- Recent musical phenomena (5 credits)

Target group:

Students selected for the minor of Music Education (25 ECTS cr) at the Faculty of Education

Prerequisites and co-requisites:

Music education studies in the primary teacher students' multidisciplinary studies (7 credits) or in early childhood education professional studies (5 credits)

Recommended optional programme components:

A student selected to this programme needs to have completed the module of basic studies in special education (25 ECTS credits) at a university. If the studies were completed more than ten years ago, a student admitted to the programme can be required to update his or her studies at the start of the programme.

For a 25-credit set of studies in special education completed previously at a university, a student will be awarded 20 credits towards the special education teacher's studies. To qualify as a special education teacher, the student will need to complete another 40 credits of studies consisting of eight (8) course components.

ECTS Credits:

40 cr

Language of instruction:

finnish

Timing:

bachelor's and master's degrees in

Learning outcomes:

The goal of the studies in special education is to give the students professional capabilities and formal qualifications for work as special education teachers in basic education. The aim is to educate well-versed experts with good interaction skills who understand the essence of special education in a broad context. The development of a professional identity is supported during the studies. Reconciliation of theory and practice, the development of theoretical thinking in support of teachership and networking with experts in the field are some of the main goals during the one-year programme. During their studies the students develop into inquiry-based teachers who are given a good idea of the breadth of the field of special education and the importance of continuous learning.

Learning outcomes:

The student is familiar with the basic methods of teaching to read and write, and understands how the various methods are bound to a language. The student is familiar with the typical development of learning to read and write during a person's course of life, and is able to identify aberrant development in terms of both technical reading, spelling, and productive reading and reading comprehension. In addition to theoretical mastery, the student also knows how to use the tools to evaluate reading and writing difficulties, and how to interpret individual results from the viewpoint of intervention. The student is familiar with various research-based methods of intervention in reading and writing, and knows how to apply them effectively to the individual needs of pupils in different ages.

Contents:

Skills of teaching to read and write, background and causal factors of reading and writing difficulties, identification and evaluation of and support in reading and writing difficulties. In early childhood education, the focus is on overall language training, especially rehabilitation of language awareness in prevention of reading and writing difficulties and risk reduction.

Vastuuyksikkö: Faculty of Education

Arvostelu: 1 - 5, pass, fail

Opintokohteen kielet: Finnish

ECTS Credits:

5 ECTS cr

Language of instruction:

Finnish

Timing:

First part of this practice period is scheduled for autumn (period 2), and the second part for spring (period 4).

Learning outcomes:

Having completed the course, the student knows how to

- plan and implement independently teaching and support based on multi-agency and special education, taking into account the pupils' welfare in a broad sense
- use the consultative approach as a tool in the working environments of special education
- reflect on her/himself as a teacher and educator and maintain her/his professional growth and coping at work

Contents:

- planning, implementation and evaluation of teaching
- a special education teacher's work in part- and full-time special education
- inclusive education, pupil welfare
- interventions
- teamwork, multiprofessional cooperation

Mode of delivery:

About 100h of school work including 20h of teaching given by the student and 6h/practice period of group supervision at the university.

Learning activities and teaching methods:

For all the students, the first period consists of three weeks in the autumn in special education in primary school, three weeks in the spring in a special support group or in secondary school, depending on the student's experiential background and orientation.

The teaching practice involves three full special teacher working days in a week, about 5h in a day. As part of the practice, the students give at least 20 lessons designed by him/herself. When s/he is in the class during the schoolday, the student also has to take part in any teamwork that may be going on, individual

tutoring of the pupils, other pedagogical tasks given by the supervising teacher, and implementing lessons designed by his/her pair. The student also participates in all the scheduled planning and feedback sessions, which total 6 hours during the practice period, and in the individual supervision by the supervising teacher and lecturer which is mostly given during the school day.

The student plans and implements an intervention following the instructions given by the supervising teacher and lecturer, and evaluates the pupils' skills by applying the theories s/he has learnt. S/he also gets to know the practices of pedagogical cooperation and takes part in the activities of multiprofessional work groups and the entire work community.

At first, the student is acquainted with the activities of the school community and special education teacher. Then s/he gets practice in the work of a special education teacher under the guidance of a supervising teacher. This includes teaching, evaluation of children/pupils, implementation of an intervention, individual, group and co-teaching, and participation in cooperation negotiations. The teaching practice shall be evenly divided between the weeks in practice. The student shall compose a report on the practice period. Broadly based practice is especially oriented to supporting the learning of mother tongue, mathematics and foreign languages.

Target group:

Student qualifying as special education teachers

Prerequisites and co-requisites:

Basic studies in special education

Recommended optional programme components:

Part of the module "Professional studies in special education"

Recommended or required reading:

To be determined at the start of the course.

Assessment methods and criteria:

A pass for both practice periods requires full participation in practice, the composition of a practice report and participation in the group supervision sessions.

Other information:

To be especially remembered: Basic Education Act 40 §. Confidentiality. The members of any authority responsible for teaching arrangements, persons referred to in section 37 of the Act and students carrying out their teaching practice are not allowed to express without a permission to any outside party what they have come to know, when performing their educational duties, about the personal conditions and financial status of the pupils or staff referred to in this act or of their family members. The persons referred to above in subsection 1 and persons in charge of school health care and other pupil welfare affairs are allowed, despite the stipulations in subsection 1 and any specific stipulations on confidentiality, give each other and authorities in charge of education the necessary information required by proper teaching arrangements.

In addition:

- The practice period includes planning and preparation for teaching with a focus on the field of duties of an early childhood special education teacher.
- The practice includes the composition of a curricular theme into a plan (design of a teaching episode/ lesson / day / week / period).
- During the practice period, the student takes part in and puts into action co-operation between the home and day care facility, taking into account the role of the early childhood special education teacher.
- The student shall familiarise him/herself with rehabilitation and co-operation carried out in the day care facility, welfare at work and cooperation inside the day care facility and between organisations. As far as possible, the student shall also take part in the meetings of the pupil welfare committee.

The student shall compose a practice report describing the implementation of the practice period based on his or her personal experiences and the feedback given by the special education teacher who supervised his or her practice. The report shall comprise at least six pages (font 12, line spacing 1.5). The student shall use aliases in the report, if s/he is dealing with sensitive issues. If the report written by a student is not approved, s/he shall compose it again. The report is graded on a pass/fail basis.

- The student also tries to take part in other events in the day care facility, such as staff meetings, employee cooperation events, collaborative planning meetings, club activities and equivalent during the practice period.
- Observing the work of an early childhood special education teacher during the first week is a prerequisite for the practice period. To teach a group in a responsible manner the student needs to know the children and previous conventions as well as possible.
- The student shall assess the fulfilment of the goals set for the practice period in his or her practice report.

Grading:

pass/fail

To gain a pass, the student shows that s/he is familiar with the central research subjects, basic concepts and approaches of research on developmental psychology, as well as the main trends and their development in its field of science. S/he is capable of proportioning concepts and approaches to each other. The student knows how to apply the basic principles and research results of developmental psychology when describing and analyzing practical interaction situations. The discussion of practical situations of interaction is analytical and well justified.

Pass = Sufficiently comprehensive and reasonably clearly formulated answers/texts/documents that prove understanding of issues and a certain degree of capacity to apply the things learnt in the course.

In a failed result, the research subjects, basic concepts, approaches and main trends of developmental psychology are discussed superficially. There are deficiencies in perceiving the relationships between concepts and approaches. The analysis and description of practical situations of interaction is mechanic and superficial, and it fails to make use of the basic concepts and research results of developmental psychology.

Fail = Short, fragmentary, unclear answers/texts/documents that do not show an understanding nor an ability to use and apply things learnt during the course.

Assessment methods and criteria:

The assessment is based on the productions announced for each study module at the start of the course. One or more of the following: lectures, assignments on one's own, in pairs or in groups, exercises, demonstrations, learning journal, summary, essay, thesis, seminar, examination or some other method.

For a pass, the student shows that s/he is familiar with the important research subjects, basic concepts and approaches in research on health psychology, as well as their main trends and development. S/he is capable of relating concepts and approaches to each other. The student knows how to apply the basic concepts and research results of health psychology when describing and analyzing practical situations of interaction. His/her consideration of practical interaction situations is analytical and well justified.

Pass = Sufficiently comprehensive, reasonably clearly formulated answers/texts/documents proving understanding of things and certain degree of ability to apply what was learnt in the course.

In a failed course performance, the discussion of the research subjects, basic concepts, approaches and main trends in research on health psychology is superficial. There are deficiencies in showing a relation between concepts and approaches. The analysis and description of practical situations of interaction is mechanic and superficial, and it fails to make use of the basic concepts and research results of health psychology.

Fail = Short, fragmented, unclear answers/texts/documents that do not show understanding nor ability to use and apply what was learnt in the course.

Recommended optional programme components:

The study module is part of the intermediate studies in education/psychology and supports the writing of a Bachelor's thesis

Recommended or required reading:

As agreed, other works and videotaped expert lectures may also be used as learning materials.

Assessment methods and criteria:

The students carry out a learning assignment, either independently or in small groups, based on the lecture and other teaching in the course, the video materials compiled from the expert lectures, and literature. The learning assignment is planned and elaborated through work in small groups with the help of the teacher and other students, and the work is finally presented to the other students in a poster session, for instance. The learning assignment can also consist of several smaller parts.

In concrete terms, the learning assignment can be a small-scale quantitative study, analysis or summary of quantitative studies conducted by others on a certain theme, an analysis of an available quantitative data set, or an essay analyzing a special issue in quantitative research.

As agreed, the course can also be arranged and credits earned in some other way, for instance by taking part in the activities of a research group in the faculty.

Criteria for course performance:

0 = unfinished and fragmented, matters presented are not essentially connected with the topic, the use of sources is almost non-existent and there is no successful concretization of the basic principles of research.

1 = highly superficial, matters are presented detached from one another, the use of sources is one-sided and superficial.

2 = superficial, matters are presented partly in detachment from each other, the use of sources is satisfactory.

3 = reflective and matters are related to each other to some extent, the core argument is to be seen and the use of sources is mainly good.

4 = quite an analytical and partly successful whole, matters are related to each other well, and the use of sources is mainly very good.

5 = a systematic and analytical whole, in which the matters are related to each other very well, and the use of sources is mainly excellent.

ECTS Credits:

25 ECTS cr

Language of instruction:

Finnish

Timing:

Students pursuing major subject studies in special education: 1st year
 Students pursuing minor subject studies in special education: 3rd or 4th year

Learning outcomes:

Having completed the basic studies, the student knows how to

- determine the position of special education as a support of the educational system
- identify and analyse the features of a separate special education service system and, on the other hand, an inclusive educational system
- describe the individual challenges in learning

Contents:

As a field of research and science, special education is an area of education which studies theoretical and practical aspects of special education. Closely related subjects include linguistics, psychology, sociology and medicine, as well as physical education and music, the concepts and theories of which are used in special education. As an area of education, special education supports the development, teaching and learning of children and adolescents in need of special support. The aim is to give educators, teachers and counsellors the necessary mindset, knowledge and skills needed in encountering learners and students who need special assistance, who need individual support in learning, as well as personal and alternative teaching methods and arrangements. Special education supports the child or adolescent through practical pedagogical means to develop socially, functionally, emotionally and intellectually in accordance with individual development resources. Special education in the school supports both general teaching and learning, but can also target individual learning, teaching and learner rehabilitation, in which cases we talk more widely of remedial education. In addition to alternative teaching methods, remedial education also includes the support from social services. Today, special education is a profession in its own right, in which practical goal-oriented methods are emphasized as are the teaching, cooperative and teamwork skills requirements of those who need alternative and personal teaching solutions.
